TIER II MANAGER™

Serving Thousands of Users

Inspection Module

The Inspection Module enables Inspectors to leverage their current Tier II database and easily schedule inspections, track inspection details and record Notice of Violations for each site.

Schedule Inspections

The Inspector Supervisor can schedule inspections for each of their Inspectors through the Inspection Module.

- Search for available personnel for scheduling inspections.
- Assign site inspections as well as area surveys to all personnel that have an inspection module account.
- Track inspections not yet assigned or completed.

Track Inspections and Follow Up

The module streamlines the record tracking of inspection details and enables Inspectors to leverage the system to find those not completed.

- Track inspection details such as Facility Identification, Scheduling Information, Inspection Findings, and Follow Up Actions.
- Tracking options for both site and area survey inspections.
- Search sites that are pending follow-ups, require Tier II resubmissions, and are not compliant.

Track Notice of Violations

Record Violation details and track the violation through its entirety through the NOV features.

- Track notice of violation details such as the unique NOV Number, Issue Date, ECB Decision, Hearing Date, and Penalties.
- Request and track resubmissions for those sites not compliant.
- Track NOV's by various statuses such as Initiated, Hearing Completed, Decision Taken, and Closed.
